

AMENDMENTS TO THE CLAIMS

1. (Original) A plug inserted into and enclosing an opening within a wall of a hollow post and securing a wire harness running within said hollow post, comprising:

at least two locks projecting out from a surface of said plug and securing said plug within the opening, at least one of said locks being located at or near a first end of said plug, and at least one of said locks being located at or near a second end of said plug, said locks resiliently engaging an edge of the opening and aligning said plug within the opening along a first axis;

at least two tensioners projecting out from said surface of said plug and resiliently engaging the edge of the opening and aligning said plug within the opening along a second axis, at least one of said tensioners being located at or near a first edge of said plug, and at least one of said resilient tensioners being located at or near a second edge of said plug;

at least one stabilizer projecting out from said surface of said plug and resiliently engaging the wall, thereby exerting tension within the plug along a third axis; and

at least one fastener for securing the wire harness to said plug.

2. (Original) The plug according to claim 1, wherein said first and second axes are approximately perpendicular to one another.

3. (Original) The plug according to claim 1, wherein said third axis is perpendicular to said first and second axes.

4. (Original) The plug according to claim 1, wherein said first and second ends of said plug lie opposite to one another, and said first and second edges of said plug lie opposite to one another.

5. (Original) The plug according to claim 1, wherein said hollow post is a pillar of an automobile.
6. (Original) The plug according to claim 1, wherein said plug is a one-piece monolithic structure.
7. (Original) The plug according to claim 1, wherein said at least one stabilizer comprises a pair of resilient protrusions extending out from said surface of said plug.
8. (Original) The plug according to claim 1, further comprising at least two stabilizers, with at least one of said stabilizers located near said first edge of said plug, and at least one of said stabilizers located near said second edge of said plug.
9. (Original) The plug according to claim 1, wherein said fastener comprises at least one clip that projects out from said surface of said plug and secures the wire harness.
10. (Original) The plug according to claim 1, wherein said fastener comprises a tie that wraps around the wire harness and then attaches to said plug.
11. (Original) The plug according to claim 1, wherein each of said at least two locks initially engages the edge of the opening with a generally rounded end portion that promotes alignment of said plug respective to the opening.

12. (Original) The plug according to claim 1, wherein each of said at least two tensioners initially engages the edge of the opening with a generally rounded end portion that promotes alignment of said plug respective to the opening.

13. (Canceled)

14. (Canceled)

15. (Canceled)

16. (Canceled)

17. (Currently Amended) A pillar shield for securing a wire harness running within a pillar, the pillar including a wall having an opening with an edge, the pillar shield comprising:

a generally planar-shaped body designed to close off ~~an~~ the opening within a the wall of the pillar;

at least two clips projecting out from said body of said pillar shield, ~~and securing said pillar shield within the opening in the wall, said at least two clips resiliently~~ each of the at least two clips having resilient locks configured for securing said pillar shield within the opening in the wall and for being compressed by an the edge of the opening, thereby aligning to align said pillar shield within the opening along a first axis;

at least two tensioners projecting out from said body of said pillar shield, said at least two tensioners each having a portion for being resiliently compressed by the edge of the opening, thereby aligning said pillar shield within the opening along a second axis;

at least two stabilizers projecting out from said body of said pillar shield, said at least two stabilizers arranged to be resiliently compressed by the wall of the pillar, thereby ~~generating tension, directed along a third axis, between said pillar shield and the wall of the pillar~~ directing a force along a third axis tending to push the shield away from the wall ; and

at least one fastener for attaching the wire harness to said pillar shield.

18. (Original) The pillar shield according to claim 17, wherein said first axis lies approximately ninety degrees from said second axis.

19. (Original) The pillar shield according to claim 17, wherein said third axis lies perpendicular to said first and second axes.

20. (Original) The pillar shield according to claim 17, wherein at least one of said clips is located at an end of said pillar shield, and at least one of said clips is located at an opposite end of said pillar shield.

21. (Original) The pillar shield according to claim 17, wherein at least one of said tensioners is located nearby an edge of said pillar shield, and at least one of said tensioners is located nearby an opposite edge of said pillar shield.

22. (Original) The pillar shield according to claim 17, wherein said pillar shield is a one-piece monolithic structure.

23. (Original) The pillar shield according to claim 17 wherein said fastener comprises at least one clip projecting out from said body of said pillar shield and securing the wire harness.

24. (Original) The pillar shield according to claim 17, wherein said fastener comprises a tie that wraps around the wire harness and then attaches to said pillar shield.

25. (Currently Amended) A pillar shield for securing a wire harness running within a pillar, the pillar including a wall having an opening with an edge, the pillar shield comprising:

a generally planar-shaped body designed to close off ~~an~~ the opening within a the wall of the pillar;

at least two clips projecting out from said body of said pillar shield ~~and securing said pillar shield within the opening in the wall, said at least two clips resiliently~~ each of the at least two clips having resilient locks configured for securing said pillar shield within the opening in the wall and for being compressed by an the edge of the opening, thereby aligning to align said pillar shield within the opening along a first axis;

at least two stabilizers projecting out from said body of said pillar shield, said at least two stabilizers arranged to be resiliently compressed by the wall of the pillar, thereby ~~generating tension, directed along a second axis, between said pillar shield and the wall of the pillar~~ directing a force along a second axis tending to push the shield away from the wall; and

at least one fastener for attaching the wire harness to said pillar shield.

26. (Original) The pillar shield according to claim 25, wherein said first axis lies approximately ninety degrees from said second axis.

27. (Currently Amended) A pillar shield for securing a wire harness running within a pillar, the pillar including a wall having an opening with an edge, the pillar shield comprising:

a generally planar-shaped body designed to close off ~~an~~ the opening within a the wall of the pillar;

at least two clips projecting out from said body of said pillar shield ~~and securing said pillar shield within the opening in the wall, said at least two clips resiliently~~ each of the at least two clips having resilient locks configured for securing said pillar shield within the opening in the wall and for being compressed by an the edge of the opening, ~~thereby aligning to align~~ said pillar shield within the opening along a first axis;

at least two tensioners projecting out from said body of said pillar shield, said at least two tensioners each having a portion for being resiliently compressed by the edge of the opening, thereby aligning said pillar shield within the opening along a second axis; and

at least one fastener for attaching the wire harness to said pillar shield.

28. (Original) The pillar shield according to claim 27, wherein said first axis lies approximately ninety degrees from said second axis.

29. (New) A plug inserted into and enclosing an opening within a wall of a hollow post and securing a wire harness running within said hollow post, comprising:

at least two locks projecting out from a surface of said plug and securing said plug within the opening, at least one of said locks being located at or near a first end of said plug, and at least one of said locks being located at or near a second end of said plug, said locks resiliently engaging an edge of the opening and aligning said plug within the opening along a first axis;

at least two tensioners projecting out from said surface of said plug and resiliently engaging the edge of the opening and aligning said plug within the opening along a second axis, at least one of said tensioners being located at or near a first edge of said plug, and at least one of said resilient tensioners being located at or near a second edge of said plug;

at least one stabilizer projecting out from said surface of said plug and resiliently engaging the wall, thereby exerting tension within the plug along a third axis; and

at least one fastener for securing the wire harness to said plug;

wherein the at least two tensioners and two of the at least two locks are hook shaped leaf springs;

wherein the at least one stabilizer includes at least two tab shaped leaf springs extending in substantially opposite directions from one another.
